

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

### AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

#### **Listing of Claims**

1. (Withdrawn) A method comprising:  
operating a logging tool in a borehole, the logging tool having a transmitting antenna;  
sending a control signal to a relay across a signal line that couples an antenna signal to  
the transmitting antenna, thereby selectively tuning the transmitting antenna;  
transmitting from the transmitting antenna an electromagnetic wave having a first  
frequency;  
transmitting from the transmitting antenna an electromagnetic wave having a second  
frequency; and  
transmitting from the transmitting antenna an electromagnetic wave having a third  
frequency.
2. (Cancelled)
3. (Withdrawn) The method as defined in claim 1 wherein selectively tuning further  
comprises controlling an amount of capacitance coupled to the transmitting antenna.
- 4.-5. (Cancelled)
6. (Withdrawn) The method as defined in claim 1 wherein selectively tuning further  
comprises controlling inductance of the winding antenna.
- 7.-8. (Cancelled)
9. (Withdrawn) The method as defined in claim 1 wherein operating further comprises  
operating a logging while drilling tool in the borehole.

Appl. No. 10/634,585

Amdt. Dated August 26, 2005

Response to Office Action Dated July 29, 2005

10. (Previously Presented) A logging tool comprising:  
a tool body configured for use in a borehole;  
a receiving antenna disposed on the tool body; and  
a transmitting antenna disposed on the tool body at a spaced apart location from the receiving antenna; and  
an antenna tuning circuit comprising a relay having a coil, the coil coupled to a signal line that carries signals to the transmitting antenna, wherein the antenna tuning circuit is selectively tunable to obtain a plurality of resonant frequencies.
11. (Previously Presented) The logging tool as defined in claim 10 wherein the antenna tuning circuit selectively couples capacitance to the transmitting antenna to obtain the plurality of resonant frequencies.
12. (Previously Presented) A logging tool comprising:  
a tool body configured for use in a borehole;  
a receiving antenna disposed on the tool body;  
a transmitting antenna disposed on the tool body at a spaced apart location from the receiving antenna, wherein the transmitting antenna is selectively operable at three or more resonant frequencies for transmitting electromagnetic radiation;  
an antenna tuning circuit coupled to the transmitting antenna, the antenna tuning circuit operable to selectively couple capacitance to the transmitting antenna to obtain the three or more resonant frequencies, the antenna tuning circuit further comprising:  
a relay having a coil, the coil coupled to a signal line that carries signals to the transmitting antenna;  
said relay having a set of contacts selectively coupled by activation of the coil; and  
wherein in a first contact position a capacitance is coupled to the transmitting antenna, and

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

wherein in second contact position the capacitance is not coupled to the transmitting antenna.

13. (Original) The logging tool as defined in claim 12 wherein the relay couples within a junction box proximate to the transmitting antenna.

14. (Previously Presented) The logging tool as defined in claim 10 wherein the antenna tuning circuit selectively couples windings of the transmitting antenna to obtain the three or more resonant frequencies.

15. (Previously Presented) A logging tool comprising:  
a tool body configured for use in a borehole;  
a receiving antenna disposed on the tool body; and  
a transmitting antenna disposed on the tool body at a spaced apart location from the receiving antenna, wherein the transmitting antenna is selectively operable at three or more resonant frequencies for transmitting electromagnetic radiation;  
an antenna tuning circuit coupled to the transmitting antenna, the antenna tuning circuit operable to selectively couple windings of the transmitting antenna to obtain the three or more resonant frequencies, the antenna tuning circuit further comprising:  
a relay having a coil, the coil coupled to a signal line that carries signals to the transmitting antenna;  
said relay having a set of contacts selectively coupled by activation of the coil; and  
wherein in a first contact position a first set of windings of the transmitting antenna is coupled in parallel with a second set of windings of the transmitting antenna, and  
wherein in second contact position the first set of windings of the transmitting antenna is coupled in series with the second set of windings of the transmitting antenna.

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

16. (Original) The logging tool as defined in claim 15 wherein the relay couples within a junction box proximate to the transmitting antenna.
17. (Original) The logging tool as defined in claim 10 further comprising:  
a plurality of receiving antennas disposed in the tool body;  
a plurality of transmitting antennas disposed on the tool body; and  
wherein at least one of the plurality of transmitting antennas is selectively operable at three or more resonant frequencies.
18. (Original) The logging tool as defined in claim 17 further comprising:  
three receiving antennas disposed on a medial portion of the tool body;  
three transmitting antennas disposed on a first end of the tool body; and  
three transmitting antennas disposed on a second end of the tool body.
19. (Original) The logging tool as defined in claim 18 wherein the tool body further comprises a tool body adapted for use within a drillstring.
20. (Previously Presented) A bottom hole assembly comprising:  
a drill bit;  
a logging tool coupled to the drill bit, the logging tool comprising:  
a tool body;  
a plurality of receiving antennas disposed on the tool body; and  
a plurality of transmitting antennas disposed on the tool body at a spaced apart location from each other and the receiving antennas;  
an antenna tuning circuit comprising a relay having a coil, the coil coupled to a signal line that carries signals to a first transmitting antenna, wherein the antenna tuning circuit is selectively tunable to obtain a plurality of resonant frequencies.

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

21. (Previously Presented) The logging tool as defined in claim 20 further comprising a plurality of antenna tuning circuits coupled one each to the plurality of transmitting antennas, each antenna tuning circuit each selectively couples capacitance to its respective transmitting antenna to achieve a plurality of resonant frequencies.

22. (Previously Presented) A bottom hole assembly comprising:

a drill bit;

a logging tool coupled to the drill bit, the logging tool comprising:

a tool body;

a plurality of receiving antennas disposed on the tool body; and

a plurality of transmitting antennas disposed on the tool body at a spaced apart location from each other and the receiving antennas;

wherein each transmitting antenna is selectively operable at greater than two resonant frequencies for transmitting electromagnetic radiation;

a plurality of antenna tuning circuits coupled one each to the plurality of transmitting antennas, each antenna tuning circuit each selectively couples capacitance to its respective transmitting antenna to achieve the greater than two resonant frequencies, wherein each antenna tuning circuit further comprises:

a relay having a coil, the coil coupled to a signal line that carries signals to a transmitting antenna;

said relay having a set of contacts selectively coupled by activation of the coil; and

wherein in a first contact position a capacitance is coupled to the transmitting antenna, and

wherein in second contact position the capacitance is not coupled to the transmitting antenna.

23. (Original) The logging tool as defined in claim 22 wherein the relay couples within a junction box proximate to its respective transmitting antenna.

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

24. (Previously Presented) The logging tool as defined in claim 20 further comprising a plurality of antenna tuning circuits coupled one each to the transmitting antennas, each antenna tuning circuit operable to selectively couple windings of a transmitting antenna to achieve the plurality of resonant frequencies.

25. (Previously Presented) A bottom hole assembly comprising:

a drill bit;

a logging tool coupled to the drill bit, the logging tool comprising:

a tool body;

a plurality of receiving antennas disposed on the tool body; and

a plurality of transmitting antennas disposed on the tool body at a spaced apart location from each other and the receiving antennas, wherein each transmitting antenna is selectively operable at greater than two resonant frequencies for transmitting electromagnetic radiation;

a plurality of antenna tuning circuits coupled one each to the transmitting antennas, each antenna tuning circuit operable to selectively couple windings of a transmitting antenna to achieve the greater than two resonant frequencies, wherein each antenna tuning circuit further comprises:

a relay having a coil, the coil coupled to a signal line that carries signals to a transmitting antenna;

said relay having a set of contacts selectively coupled by activation of the coil; and

wherein in a first contact position a first set of windings of the transmitting antenna is coupled in parallel with a second set of windings of the transmitting antenna, and

wherein in second contact position the first set of windings of the transmitting antenna is coupled in series with the second set of windings of the transmitting antenna.

Appl. No. 10/634,585  
Amdt. Dated August 26, 2005  
Response to Office Action Dated July 29, 2005

26. (Original) The logging tool as defined in claim 25 wherein the relay couples within a junction box proximate to its respective transmitting antenna.

27.-28. (Cancelled)

29. (Withdrawn) A method comprising:  
operating a logging tool in a borehole, the logging tool having a first and second antennas;  
transmitting an electromagnetic wave from the first antenna; and  
tuning the second antenna to resonate at other than the frequency of the electromagnetic wave transmitted by the first antenna.

30. (Withdrawn) The method as defined in claim 29 wherein tuning the second antenna further comprises controlling an amount of capacitance coupled to the second antenna.

31. (Withdrawn) The method as defined in claim 29 wherein tuning the second antenna further comprises controlling inductance of the second transmitting antenna.

32.-41. (Cancelled)
